

Satellite radio is offering invaluable services. I travel very frequently. I am based out of Wyoming but travel all over the US. I can get accurate weather for any locality throughout the country. Local free radio can not offer me that, neither can cable TV channels. I would have to go back to my room, wait for the city weather for the city I want, and even then it will not be as specific as I want. Please reject NAB petition 04-160.
